## Materials

**Concrete Hardener** (one-pack, water-based concrete floor hardener), **Cure & Seal** (a chlorinated rubber curing and sealing compound).

## Surface Preparation

The surface to be treated must be clean and sound and be free of oil dusts, dirt, grease, water puddles and other contaminants. New concrete shall have cured for 14 days.

## Workmanship

Apply products in accordance with the manufacturer's written instructions and good trade practice.

## Application

Apply two coats of **Concrete Hardener** at a 4-6 hour interval between coats. Let the final coat dry for 24 hours then wash the surface thoroughly with water and a broom. Let dry thoroughly (24-48 hours) and apply two coats of **Cure & Seal**, allowing 2 hours drying time between coats.
